

LATEST HOCKEY STICK TECHNOLOGY WITHIN YOUR REACH

For 2017 we are proud to launch the most technically-focused Grays range to date; featuring three levels of composite technology to suit all players and techniques. The GX range remains a core foundation, while we have expanded the GR range in response to exceptional player feedback. After an extensive test period in both the lab and on pitch, we are also excited to announce a full KN lineup, which delivers unbelievable pickup and agility without sacrificing power or stability. Our extensive shape collection is highlighted by the new Probow Xtreme, which is our most extreme profile to date. With a hugely exaggerated Probow shape, enhanced dragflick groove, and unique toe profiling, this stick is fully engineered for dynamic 3D play.

The Grays research programme continues to push technology limits within the lab, with all concepts simultaneously tested on the field. With our unrivalled player profile we are proud to offer products and technologies which truly respond to the needs of top internationals and club players alike.

PROBOW XTREME

The Probow Xtreme is an evolution of the Probow shape, with the sole purpose of pushing the limits of 3D play. The playing face has been completely re-engineered to increase the dragflick zone, and the flat backhand edge has been increased to generate extra strike power. Combined with unique toe design for close skills, and embossed Power Groove on the reverse of the stick, make this an exceptional stick for dynamic modern play.

Suitable for:

- Drag flicking, dynamic 3D skills and aerals
- Combinations of technical play, hitting and flicking

Blade Profile: 24.75mm Curve Location: 200mm

PROBOW

The Probow profile is defined by a straight profile which transitions into an extremely low bow, making it perfect for 3D skills and drag flicking. A unique Dragflick Groove on the face helps control the ball, while the square-profile edge increases the sweet spot for backhand shots. The thin profile of the stick is ideal for flicking and pushing, and is combined with an aggressively sculpted heel which helps get underneath the ball for aerals and 3D play.

Suitable for:

- Drag flicking, dynamic 3D skills and aerals
- Combinations of technical play, backhands, and flicking

Blade Profile: 24.75mm Curve Location: 200mm

JUMBOW

The Jumbow profile combines the low curve location of the Probow, with the sweeping curve of the Dynabow. This makes it a dynamic stick for all styles of play; with the ability to perform 3D skills and the power for traditional striking shots. The thick profile and heel are well suited to striking and tackling, while the hook option offers extra stopping area.

Suitable for:

- Combinations of technical play, backhands, and hitting
- Drag flicking, aerals

Blade Profile: 24.75mm Curve Location: 200mm

DYNABOW

The Dynabow profile offers a refined, sweeping curve along the length of the stick, while maintaining a maximum height allowed under FIH regulations. Combined with a slim headshape and round lower-hand profile makes these sticks excellent for all-round play and nimble 3D skills.

Suitable for:

- Combinations of technical play, hitting, and dribbling
- Dynamic 3D skills and aerals

Blade Profile: 24.75mm Curve Location: 250mm

MIDBOW

The Midbow profile maintains a high curve location, giving it a classic curve while still conforming to FIH regulations. The face of this shape is extremely flat, with a unique cross-section profile to generate extra stiffness. The rear profile also incorporates embossed Power Grooves to create extra torsional stability and stiffness.

Suitable for:

- Combinations of technical play, and aerals
- Slap hitting, sweeping, and flat techniques

Blade Profile: 24.75mm Curve Location: 300mm

ULTRABOW

The Ultrabow profile is the least extreme model, which features a classic profile and gentle sweeping curve. The micro headshape and thin toe make this shape ideal for general play and simple 3D skills.

Suitable for:

- Combinations of general play and simple 3D skills
- Controlled passing, receiving, and shooting

Blade Profile: 22.00mm Curve Location: 300mm

HEADSHAPES

To suit all styles of play, the collection features two angles of headshape, which complement the shape profile of each stick.

Maxi 45° Angle - Traditional shape for hitting

Micro 50° Angle - Modern shape for dynamic play

SIZE GUIDE

These measurements are a guide. Please visit a local retailer or our outlet store to see which stick best suits your needs.

Height (cm)	Stick Length
< 122	26"
123-131	28"
132-140	32"
141-152	34"
153-161	35"
162-177	36.5"
178-185	37.5"
> 190	38.5"
